1.Can you determine what the web site is to be used for by looking over the web site?
Somewhat.

2. If so describe what you think the purpose of the web site is.
At first I thought it was an online shop but after navigating the site more thoroughly I am not sure whether it is that or a system for the employees of a shop to use to process purchases and keep track of stock.

3. Was it easy to navigate through the web site?
The website had several different ways to navigate depending on what part of the site you were on. It was not the simplest to navigate.

4. Did you find any errors while navigating the web site?
No.

5. If so, please list the page URL and cut and paste the error.
I found no obvious errors.

6. What did you like about the web site?
There was a lot of detail in it. The shopping cart was well done, it was able to remember what I put in it even while navigating the site. I think the site was well done and it feels like a lot of time and effort was put into it.

7. What did you not like about the web site?
It was a bit odd to navigate. There were pages you could only access through other pages, which is fine but if I was looking for a specific page from the beginning I might have had a hard time doing it.

8. Do you have any suggestions to improve the web site?
My main suggestion would be about navigation. Perhaps add a description to the main admin menu options, and keep the way you navigate consistent. For example if one page has a button that says Admin menu and another page has a sidebar option that says admin menu maybe those should be consistent so I always knows how to get back.
